EDUCATION

FAST National University of Computer and Emerging Sciences

Bachelor of Science in Computer Science, CGPA 3.57/4

Karachi, Pakistan

August 2022 - June 2026

EXPERIENCE

Associate Software Engineer

Nov 2025 - Mar 2026

FlowMaster

Remote

- Developed 14 Python/FastAPI microservices from scratch — auth with RBAC, API gateway, process design, execution engine, AI agents (Claude API), human tasks, notifications, scheduling, event bus, WebSocket gateway, document intelligence, audit logging, service registry, and marketplace.
- Built end-to-end process automation: workflow modeling, real-time execution with state management, AI agent orchestration, multi-channel notifications, async event-driven messaging, and a marketplace with install/uninstall lifecycle.
- Deployed on Kubernetes (K3S) across multiple Hetzner servers with GitLab CI/CD, Docker, nginx, ArangoDB, PostgreSQL, and Redis. Managed cross-server data sync and database migrations.

Node.js Intern

Sep 2025 - Oct 2025

CyberState Technologies

Karachi, Pakistan

- Stabilized production Node.js APIs by identifying and fixing backend bugs, improving system reliability and performance across the platform.
- Migrated legacy EJS templates to React.js, optimized backend routes, and delivered new feature modules enhancing both usability and efficiency.

Full-Stack Developer Intern

June 2025 - August 2025

Techmile Solutions

Karachi, Pakistan

- Built a complete Inventory Management System with Angular frontend, Node.js backend, and React Native mobile app with end-to-end API integration.
- Created automated Playwright-based data scraping pipelines and integrated mobile app workflows with backend APIs for device listing and inventory management.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, C++, SQL

Backend: FastAPI, Node.js, Spring Boot

Frontend: Next.js, React.js, Tailwind CSS

Databases: PostgreSQL, MongoDB, Redis

DevOps: Docker, Git, GitLab CI/CD

Architecture: Microservices, Event-Driven, RBAC, Multi-Tenant, REST APIs, WebSocket

AI/LLM: Claude API, Agent Orchestration

PROJECTS

AirCash | *Spring Boot, Blockchain* | *Final Year Project*

- Built the backend for a digital financial platform using Spring Boot (Java), implementing secure transaction processing and wallet management RESTful APIs.
- Designed the blockchain architecture for secure transaction verification, defining the integration layer between the backend APIs and the blockchain network.

Bazaar: Inventory System | *Node.js, PostgreSQL, Docker, Redis*

Project Link

- Architected a scalable backend service with RESTful APIs for inventory tracking and stock movements, transitioning from SQLite to PostgreSQL for production-grade performance.
- Integrated RBAC authentication, Redis-based caching and API rate-limiting, and configured Docker for read/write database separation.

Enviro | *Node.js, PostgreSQL, Socket.io, Next.js*

Project Link

- Built a full-stack waste management platform with real-time Socket.io notifications, PostgreSQL backend, and AI-powered image classification using Gemini Flash API.
- Designed RESTful APIs for waste pickup scheduling, recycling tracking, and a reward system with role-based workflows.
