SUMMARY

Software Engineer experienced in building **microservices from scratch**, **Kubernetes** deployments, **AI agent** integration, and full-stack development.

EDUCATION

FAST National University of Computer and Emerging Sciences

Karachi, Pakistan

Bachelor of Science in Computer Science, CGPA 3.57/4 – Dean's List (4x)

August 2022 - June 2026

EXPERIENCE

Associate Software Engineer

Nov 2025 - Mar 2026

FlowMaster

Remote

- Developed **14 Python/FastAPI microservices** from scratch: auth with RBAC, API gateway, process design, execution engine, AI agents (Claude API), human tasks, notifications, scheduling, event bus, WebSocket gateway, document intelligence, audit logging, service registry, and marketplace.
- Built **end-to-end process automation**: workflow modeling, real-time execution with state management, **AI agent orchestration**, multi-channel notifications, async event-driven messaging, and a marketplace with **install/uninstall lifecycle**.
- Deployed on **Kubernetes (K3S)** across **5 Hetzner servers** with **GitLab CI/CD**, Docker, nginx, PostgreSQL, and Redis. Managed cross-server data sync and database migrations.

Node.js Intern

Sep 2025 - Oct 2025

CyberState Technologies

Karachi, Pakistan

- Stabilized production Node.js APIs by fixing backend bugs. Migrated legacy EJS to React.js, optimized routes, and delivered new feature modules.

Full-Stack Developer Intern

June 2025 - August 2025

Techmile Solutions

Karachi, Pakistan

- Built a complete Inventory Management System (Angular, Node.js, React Native) with end-to-end API integration and Playwright data scraping pipelines.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, C++, SQL

Backend: FastAPI, Node.js

Frontend: Next.js, React.js, Tailwind CSS

Databases: PostgreSQL, MongoDB, Redis

DevOps: Docker, Git, GitLab CI/CD

Architecture: Microservices, Event-Driven, RBAC, Multi-Tenant, REST APIs, WebSocket

AI/LLM: Claude API, Agent Orchestration

PROJECTS

AirCash | *Spring Boot, Blockchain* | *Final Year Project*

- Built the backend for a digital financial platform using **Spring Boot** (Java), implementing **secure transaction processing** and wallet management RESTful APIs.
- Designed the **blockchain architecture** for secure transaction verification, defining the integration layer between the backend APIs and the blockchain network.

Bazaar: Inventory System | *Node.js, PostgreSQL, Docker, Redis*

[Project Link](#)

- Architected a scalable backend with **RESTful APIs** for inventory tracking, transitioning from SQLite to **PostgreSQL** for production-grade performance.
- Integrated **RBAC authentication**, **Redis caching**, API rate-limiting, and configured **Docker** for read/write database separation with **PM2 horizontal scaling**.

Enviro | *Node.js, PostgreSQL, Socket.io, Next.js*

[Project Link](#)

- Built a full-stack platform with **real-time Socket.io** notifications, PostgreSQL backend, and **AI-powered image classification** using Gemini Flash API.
- Designed RESTful APIs for waste pickup scheduling, recycling tracking with **150+ recycling centers** on interactive map, and role-based workflows.
